

20 OCTOBER 2024

# The Next Iteration Of Combat Drones

---

Kevin Taylor, Matthew Law, Sam Dickson, Lorenzo  
Santili, Nirmai Puthanveetil

Defensible drones need to be truly  
autonomous.

# Drone Capabilities

## Core Functions:

- Should:
  - Provide live and accurate location data
  - Autonomously identify and classify assets
- Should not:
  - Openly broadcast communications (between the drone and pilot) and gathered intelligence
  - Depend on vulnerable internet/satellite infrastructure when in flight

THE SOLUTION

Shadow Laser

Before

After

## Layered Functionality: Local Object Inference

Records, stores, and computes video feed, onboard

- Works Offline
- Does not communicate to any external servers
- Autonomously classifies objects

Combined with untraceable GPS

- Drone Operation on predetermined GPX routes
- Autonomously and dynamically make combat decisions
- All WITHOUT external exposure of intelligence.

Demo
